

Patient specific hoist slings

Manufactured in Great Britain
by Care-ability Healthcare 

A range of patient specific slings manufactured in house in the U.K. by Care-ability Healthcare.

Our products are manufactured to the same high standards as our re usable Lifestyle product range. We use a high quality non woven polyester which has a very soft feel to it adding to the comfort for the patient. Each sling has a safe working load of 250Kg.

As we are the manufacturer we can provide our standard range of products or manufacture a custom made product in the same way as we would with our Lifestyle product range. This could be a specific dimension change, body belt, dual fastening or slide sheet material to legs. Although we provide a broad range of standard products on occasion a patient may require something bespoke, this is where Care-ability Healthcare are able to provide a fast turn around bespoke service.

Our patient specific slings have been tested to a minimum of 1.5 times the safe working load for the minimum time of 20 minutes. After the initial test the products have been taken to destruction with astonishing results of over 900kg. The slings were tested in the U.K. and in house by us to the requirements of EN ISO 10535:2006 and carry the CE mark.

Options available

- Slide sheet material to legs
- Clip fastening
